

What Happens When Kubla Khan Gets Removed

By: Laila Rose Travis

In 2020 scientists figured out that Kubla Khan has a special water inside of it that can heal all the sicknesses. They were so anxious to get the water. Word spread, and people were so excited. Then Covid-19 came so if they were going to get the water, they would have to do it now.

Most of the workers got Covid, and the others got hurt getting into the cave. So the scientists Cloe, Emma, George, and Fred will have to do it themselves. They grabbed chainsaws, jackhammers, and axes and got to work.

"I don't think it's working," Cloe said, depressed.

"Well, we're too far in now," said George.

It took several weeks just to take one medium size piece out of Kubla Khan.

Then the cave started to collapse while the scientists were still in there.

While the cave was shaking there was an opening. It wasn't until a few seconds later that the scientists saw the opening.

"Look there's an opening," Emma said, slightly shaking.

"Come on, let's climb," Fred said, slightly afraid.

It was the hardest climb they have ever done. Rocks were falling everywhere. After 15 minutes of climbing they finally got out of the cave, sadly without the water.

THE END
